

# Master Blaster

Profitability for a blasting company frequently depends on how well their skilled blasting staff is utilized. If your blasters spend their time writing reports and documenting every facet of their work, they are not generating revenue. Many U.S. federal and state agencies, such as the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) and the Department of Environmental Protection (DEP), are increasing their expectations for strict accounting of inventory and blast documentation. Blasting company executives and managers are now facing the possibility of incarceration, fines and suspended operations if their documentation is not in order.

*"Master Blaster makes it easy for our staff to quickly and accurately document our inventory blasts."*  
**-Tim Reinhold ,  
Blasting Superintendent  
Brubacher Excavating**

Master Blaster™ is an inventory and blast management software system that addresses these issues and dramatically improves documentation accuracy, minimizes paperwork, and allows for rapid search and retrieval of inventory and blast documentation. This innovative web-based software product enables blasters, support staff, and managers to have secure access to the most up-to-date information regarding customers, inventory, billing, seismograph and other blast data from anywhere in the world via the Internet.

## How It Works

Your staff accesses Master Blaster via a user name and password from their laptops or from the host system (internal server). A secure login page directs blasters to the appropriate data entry forms and directs managers, executives and support staff to the appropriate content management and report areas of the Master Blaster system.

### Master Blaster Benefits

- Provides real-time inventory tracking by item number/date code
- Greatly reduces errors and eliminates paperwork
- Improves employee efficiency and productivity
- Reduces regulatory fines and litigation risk
- Enables detailed data mining and report capabilities.
- Improves material and labor tracking
- Securely accesses and controls data from anywhere

When blasters enter data, it is tracked and shared with the host system through a one-step synchronization process. At a minimum, this synchronization process takes place at the beginning and end of each day.

Once the data is entered, authorized supervisors and support staff can view all documents and reports on an as-needed basis.

## Improve your Profitability and Comply with Regulations

Master Blaster's fast accurate storage and retrieval of all your data and related documentation, such as videos, pictures and graphs, saves you time. In addition, Master Blaster's ability to manage and track blasting data, materials, and labor not only reduces your paperwork, but also reduces the potential for documentation errors. The result is peace of mind that your business and its records are protected in this dangerous and highly regulated environment.
